

HSG 236

Power Press Inspections

T.M.A. can now offer a **COMPLETE** HSG 236 Mechanical Inspection package for your power presses.

i.e. Service Engineer to travel to your works, carry out a clutch and brake inspection, crack detect the relevant parts, check the guards and carry out basic electrical checks then re-assemble the press and issue a full HSG236 Inspection Report.

Our Engineers are qualified to PCN Level II N.D.T. using the Magnetic Particle Method which is recognised by the British Institute of Non-Destructive Testing (BINDT).

Our inspection and the subsequent report provided will satisfy your insurance company's requirements. It will also mean a reduction on cost for yourselves as you will no longer need an insurance engineer to attend to carry out NDT checks.

Obviously, in the current climate any savings that can be made will be of benefit to you. We will be pleased to offer a quotation for any HSG 236 requirements you may have, now or in the future.

Please do not hesitate to contact us if you have any queries or require any further information.

We can also provide a full HSG236 Electrical Inspection if required.

**Power Press Specialists
Service - Spares - Repairs**
